

CTM Centre Tecnològic sets up a new laboratory in Flix

Flix council, with the backing of the Ministry for Industry, Tourism and Trade, has built a new Business Centre complex in “La Devesa” industrial estate. The complex is located in a strategic area for the promotion of environmental, energy production and agro-environmental projects, and projects for improving the water cycle.

CTM Centre Tecnològic , in close collaboration with Flix council, participated in the planning of the infrastructures in order to convert part of the facilities into the foremost environmental technology laboratory in the area.

CTM Flix Tecnologia Ambiental will carry out different R&D&I projects and provide advanced technological services designed to support companies and public administrations, as well as driving environmental quality in Flix and surrounding area. One of the main objectives of CTM is its participation in the project for the remediation of sediment in the local dam, without forgetting other questions of a greater scope in the area, such as water management, the protection of soils, and improved waste management.
